A report to draw lessons form the first ten years of activities in the Pacific

In 2007, more than eight years before the Paris Agreement finally materialized, the Pacific SIDS and Italy decided that something had to be done regarding the development of climate change mitigation and adaptation measures in the Pacific region.

We made a “we must do” promise to each other and launched a Partnership dedicated to climate cooperation.

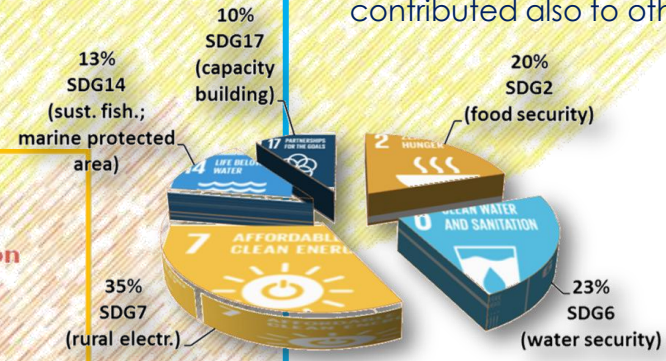

IMELS produced a report to collect and keep together data, best-practices, experiences of the first ten years, in order to preserve a common ground and shared meaning on which to base the next decade of cooperation.

The Results of Ten Years of Activities within the Partnership

In a decade of activities of cooperation with the PSIDS, the projects equally addressed mitigation and adaptation needs following principles of sustainable development.

The primary goal of the Partnership has been the implementation of SDG 13 (Climate Action), it has substantially contributed also to other goals within the 2030 Agenda.

PSIDS involved in the Partnership

Cook Islands, Fiji, Kiribati, Micronesia, Marshall Islands, Nauru, Niue, Solomon Islands, Palau, Papua New Guinea, Samoa, Tonga, Tuvalu, Vanuatu

Since the signing of the Paris Agreement, IMELS financed projects for eight millions dollars aimed at implementing the NDCs, in particular on:

- (i) Energy-based adaptation and mitigation;
- (ii) Ocean-based adaptation;
- (iii) Capacity building
- (iv) Resilient agriculture and water security
